Name: Vinayak Madan Shete

Roll No.: SYCOC303 Course Name: Microprocessor Architecture Lab

Div: C Batch: C4 Course Code: BCE4302

Problem Statement:

Write X86/64 ALP to perform overlapped block transfer with string specific instructions Block containing data can be defined in the data segment

```
Input:
```

```
;Assignment No.07
section .data
    nline_len equ $-nline
    space db " "
    ano
10,"=======
          -----"
        db 10,"=======Assignment No.07======="
        db 10,"Block Transfer==> Overlapped with string instruction"
ano_len equ $-ano
    bmsg db 10, "Before Tranfer==>"
    bmsg_len equ $-bmsg
```

```
amsg db 10,"After Tranfer==>"
      amsg_len equ $-amsg
      smsg db 10,"Source Block==>"
      smsg_len equ $-smsg
      dmsg db 10,"Destination Block==>"
      dmsg_len equ $-dmsg
      sblock db 11H,12H,13H,14H,15H
      dblock times 5 db 0
section .bss
      char_ans resb 2
%macro print 2
      mov rax,1
      mov rdi,1
      mov rsi,%1
      mov rdx,%2
      syscal1
%endmacro
%macro read 2
      mov rax,0
      mov rdi,0
      mov rsi,%1
      mov rdx,%2
```

```
